The WIŚNIEWSKI Company

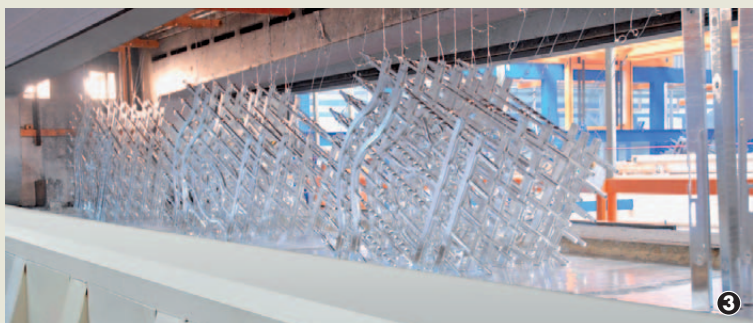

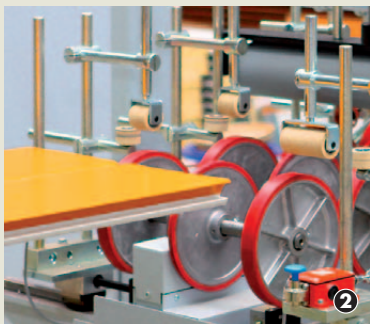

The WIŚNIEWSKI Company is currently the largest manufacturer of garage and industrial doors, and fencing systems in Central Europe. We offer solutions for residential and industrial building sector.

WIŚNIEWSKI is a private company based entirely on Polish equity. The company currently employs over 1000 people.

Quality policy plays a crucial role in the activities and development strategy of the WIŚNIEWSKI Company. For several years the company has operated with the Quality Management System certified according to ISO 9001:2008.

Efficient customer service is provided by over 1500 sales outlets all over the country and abroad. Our products are delivered by means of our specialized transportation fleet.

Production lines

Production compliant with international standards requires the application of innovative technologies: automated production process guarantees reliability and precision, effective processes ensure competitive prices, and the best raw materials allow for end product of the highest quality.

DUPLEX System

In the hot-galvanizing and powder-coating sections, steel doors and fences acquire durability and aesthetic value. Double surface coating (DUPLEX system) provides a high degree of protection and guarantees a long term performance of the product.

1. Section of a 150-metre production line of panels for sectional doors. 2. Panel film coating line. 3. Hot dip galvanizing process. 4. Powder coating plant – technological line.

Sectional garage doors

Designed and manufactured to meet the needs of demanding users, these doors provide warmth, durability, functionality and comfort.

Every house is different and requires an individual approach. Our sectional doors can be easily matched with the joinery and facade of any building. The variety of available designs and colours provides unlimited number of choices. The opening may also come in different shapes: rectangular, bevel-edged, arched or rounded. Sectional doors always fit any of these shapes.

Roller garage doors

Roller doors are a perfect solution for all users who value comfort, durability and aesthetic finish.

Roller doors are as standard automatic and can be additionally equipped with a remote control for convenient operation with a transmitter. Roller doors are durable – made of corrosion-proof aluminium – and very functional. Solid structure provides maximum space efficiency in the garage and on the driveway. Roller doors are available in attractive colours and standard or custom-made sizes.

Overhead garage doors

One of the most popular and well-tested type of doors on the market. Its low price is guaranteed by simple and traditional construction solutions.

The classical trapezoidal sheet metal filling in vertical, horizontal or diagonal layout is always a trendy solution. Durability of the construction is guaranteed by hot dip galvanizing, the surface is further galvanized and coated with polyester. The door can be produced with thermal insulation and equipped with drive unit. It is also possible to increase its functionality by means of practical accessories, such as service wicket, ventilation grates or glazing.

Single and double-leaf garage doors

Traditional closing solution with a modern look.

These doors are often used in garages and utility rooms under renovation because of a wide range of available sizes and no requirement for a door headroom. They are available in several versions: single-leaf or double-leaf doors, with or without glazing, and symmetric or asymmetric leaves. In case of large-size doors it is recommended to install an additional door in one of the leaves – this facilitates communication when the garage is used frequently.

Automatic controls for garage doors

Automatic control systems provide convenient operation in any atmospheric conditions.

Automatic controls allow easy and safe operation of every door without any effort or trouble. The transmitter makes it possible to open the door with one key, the code lock activates the drive unit after entering personal access code, the control and notification system by WIŚNIEWSKI allows opening and closing the gate with a mobile phone. Therefore one remote control can be used to activate both the garage door and the residential gate.

External doors

Lines: Deco **Basic**, Deco **Classic**, Deco **Top** and Plus **Line**

Doors: external **AW 001-D**
Line: Plus **Line**

External doors by WIŚNIEWSKI stand for durability, safety and aesthetic look.

Thermally insulated aluminium doors produced in MB60 and MB70 systems provide very good thermal insulation of the room. They are durable – resistant to humidity and UV radiation, with a 10-year guarantee on the paint coating. These doors provide security to the house by means of a lock with a certificated insert or a C-class three-point hatchet double door bolt, an interlocking door bolt and an exclusive Hoppe handle.

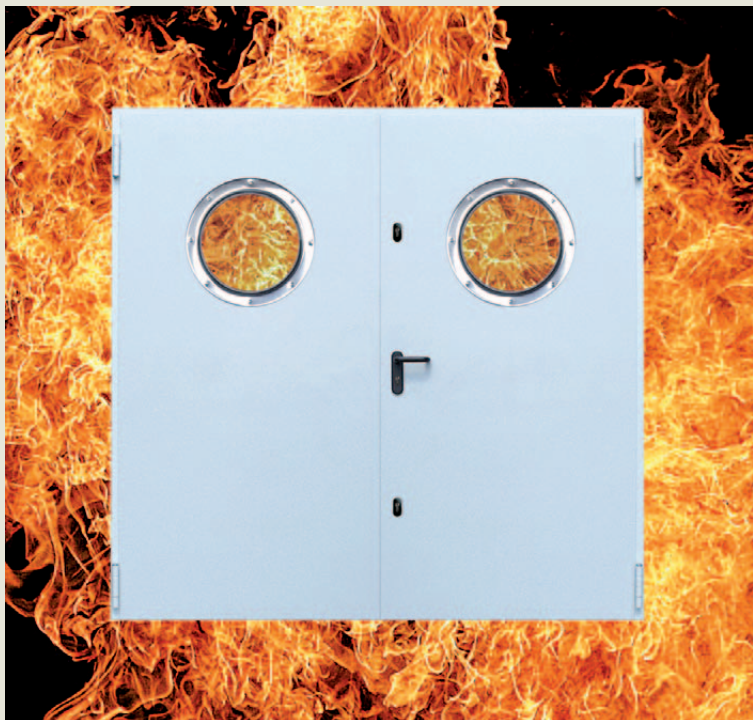

Side door to match the garage door

**Most frequently used as additional entrance to the garage,
usually in proximity of the garage door.**

The door perfectly matches the garage door, as it has the same design and colour – they make a perfect combination when installed next to each other. The door is durable – it is made of high quality aluminium and corrosion-resistant steel. It can be equipped with a handle or pull handle. The hinges with three-step regulation allow perfect fitting of the leaf to the frame, so that the door is well sealed, closes easily and securely.

Fire-resistant seamless doors

Reliable protection against fire.

Fireproof doors are manufactured in two fire resistance classes: EI 30 and EI 60. They are designed to be used in private (boiler rooms, maintenance rooms), industrial and public utility buildings. They are available as single or double leaf, rebated doors with full or partly glazed leaf and a threshold or without it. As a standard all doors are equipped with lever tumbler locks with inserts and 3 keys, handles and self-closers. Our doors are also available in anti-burglar versions.

Residential sliding gates

Modern, comfortable and reliable in any conditions.

Residential sliding gates move a few centimetres above the driveway, so that the leaf is not blocked by any objects. Convenient operation in any conditions is assured by an automatic drive integrated into the gate post – this innovative solution has been designed by WIŚNIEWSKI Company's engineers. A steel post prevents harmful atmospheric effects and provides protection against theft. Operation safety is guaranteed by the overload switch, photocells, safety bars and a warning lamp.

Residential double-leaf gates

Modernity with traditional look.

Luxurious gates that add original character, exclusive style and elegance to any residential premises. Convenient operation is assured by a remote controlled drive unit. Several dozen designs and 210 RAL colours provide numerous arrangement possibilities. Double-leaf gates may be purchased together with mounting elements that allow their assembly on posts made of any material: steel, stone or clinker.

Residential fences segments • wickets • posts

Rich design, variety and perfect finish.

Residential fences by WIŚNIEWSKI are systems of segments and posts, sliding or double-leaf gates and wickets. They come in several dozens of different designs in standard, in special or any RAL colour, in typical or custom-made sizes. Fences by WIŚNIEWSKI are manufactured in the company's plant in Wielogłowy by means of modern technological lines, supported by extensive know-how and experience of our engineers.
